## Perceptions of Job News Trend Upward

## Seven-in-Ten Hearing Mostly Good News About Gas Prices

For the first time in at least five years, as many Americans say they are hearing good news (26\%) as bad news (25\%) about the nation's job situation; a $45 \%$ plurality reports hearing a mix of good and bad news.

This is the first time that more than 20\% have expressed positive views about job news since the Pew Research Center began tracking this question in 2009. In June of that year, just 1\% said news about the job situation was mostly good, and $71 \%$ said it was mostly bad. In the last year alone, the share hearing mostly bad

Survey conducted Dec. 11-14, 2014.
PEW RESEARCH CENTER
news about jobs has fallen 15 points, while the percentage hearing mostly good news has risen nine points.

When it comes to news about the overall economy, most continue to say that they're hearing a mix of good and bad news ( $63 \%$ ), while $21 \%$ say they are hearing mostly bad news and $14 \%$ are hearing mostly good news. The gap between positive and negative perceptions has narrowed considerably since a year ago, when $31 \%$ were

Survey conducted Dec. 11-14, 2014.
PEW RESEARCH CENTER
hearing bad news and $7 \%$ were hearing good news.

The new national survey by the Pew Research Center, conducted Dec. 11-14 among 1,001 adults, finds that declining gas prices are registering widely with the public. Seven-inten (70\%) are hearing mostly good news about gas prices, compared with just $8 \%$ who are hearing mostly bad news.

Public perceptions of gas prices are by far the most positive of four economic sectors tested (gas prices, the job situation, retail sales and the stock market). Views of news about gas prices have improved dramatically from early August, when $44 \%$ said they were hearing mostly bad news about gas prices and just $15 \%$ were hearing largely good news. Last year at this time, $36 \%$ were hearing mostly bad news about gas prices and $23 \%$ were hearing good news.

Prior to this survey, perceptions of gas prices had never been more positive than negative in Pew Research's periodic tracking that started in February 2011. In July 2012, as many were hearing mostly good news about gas prices as bad news (31\%).

Majorities in all geographic regions say they are hearing mostly good news about gas prices, which average $\$ 2.55$ across the country, according to the U.S. Energy Information Administration

With the holiday shopping season underway, about twice as many are hearing good news about retail sales (28\%) as bad news (13\%); about half (48\%) are hearing mixed news. This sentiment is roughly in line with opinions measured in December of each of the previous two years.

Despite the Dow Jones Industrial Average trading near record highs, attitudes are mixed when it comes to recent news about the stock market. Two-in-ten (20\%) say they are hearing mostly good news about the stock market compared with $16 \%$ who are hearing mostly bad news; $45 \%$ say news has been mixed and $19 \%$ say they don't know.

## More Positive Views of News on Gas Prices Than News About Other Sectors

Survey conducted Dec. 11-14, 2014.
PEW RESEARCH CENTER

## Partisan Differences in Views of Jobs News

Republicans and Democrats have similar views when it comes to news about gas prices, retail sales and the stock market. However, they differ in their judgments of jobs news and overall economic news.

Among Democrats, nearly four-in-ten (39\%) are hearing mostly good news about the job situation and just $17 \%$ are hearing largely bad news. By comparison, 24\% of Republicans are hearing mostly good jobs news and $33 \%$ are hearing mostly bad news. Differences in views are especially wide between liberal Democrats ( $47 \%$ good vs. $16 \%$ bad) and conservative Republicans ( $19 \%$ good vs. $39 \%$ bad).

When it comes to overall economic news, $60 \%$ of both Democrats and Republicans say the news lately has been mixed, but somewhat more Democrats (20\%) than Republicans (12\%) say it has been mostly good.

Those with family incomes of \$30,000 or less see a dimmer picture; across all economic sectors, they are less likely than higher-income adults to report hearing mostly good economic

## Democrats More Likely to Say They're Hearing Good News About Job Situation

\% hearing mostly good news about ...

|  | Rep <br> $\%$ | Dem <br> $\%$ | Ind <br> $\%$ | Dem-Rep <br> diff |

| PEW RESEARCH CENTER |  |  |  |  | news. For example, two-in-ten (20\%) lower-income adults say they are hearing mostly good news about the job situation, compared with $35 \%$ of those with family incomes of $\$ 75,000$ or more.

## About the Survey

The analysis in this report is based on telephone interviews conducted December 11-14, 2014 among a national sample of 1,001 adults, 18 years of age or older, living in the continental United States ( 500 respondents were interviewed on a landline telephone, and 501 were interviewed on a cell phone, including 306 who had no landline telephone). The survey was conducted by interviewers at Princeton Data Source under the direction of Princeton Survey Research Associates International. A combination of landline and cell phone random digit dial samples were used; both samples were provided by Survey Sampling International. Interviews were conducted in English and Spanish. Respondents in the landline sample were selected by randomly asking for the youngest adult male or female who is now at home. Interviews in the cell sample were conducted with the person who answered the phone, if that person was an adult 18 years of age or older. For detailed information about our survey methodology, see http://people-press.org/methodology/

The combined landline and cell phone sample are weighted using an iterative technique that matches gender, age, education, race, Hispanic origin and region to parameters from the 2012 Census Bureau's American Community Survey and population density to parameters from the Decennial Census. The sample also is weighted to match current patterns of telephone status (landline only, cell phone only, or both landline and cell phone), based on extrapolations from the 2013 National Health Interview Survey. The weighting procedure also accounts for the fact that respondents with both landline and cell phones have a greater probability of being included in the combined sample and adjusts for household size among respondents with a landline phone. Sampling errors and statistical tests of significance take into account the effect of weighting.

The following table shows the unweighted sample sizes and the error attributable to sampling that would be expected at the $95 \%$ level of confidence for different groups in the survey:

| Group | Unweighted <br> sample size <br> 1,001 | Plus or minus ... <br> Total sample |
| :--- | :---: | :---: |
|  |  | 3.6 percentage points |
| Republican | 274 |  |
| Democrat | 277 | 7.0 percentage points |
| Independent | 348 | 6.9 percentage points |

Sample sizes and sampling errors for other subgroups are available upon request.

In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.
