GOP's Favorability Rating Edges Lower

A quarter of the public views both parties unfavorably

The Republican Party's image, already quite negative, has slipped since last fall. Currently 33% of the public has a favorable impression of the Republican Party, while 62% have an unfavorable view. Unfavorable opinions of the GOP are now as high as at any point since 1992.

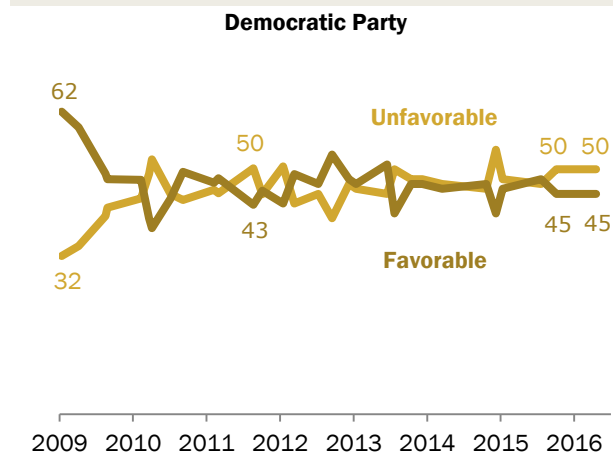

In October, 37% viewed the Republican Party favorably and 58% viewed it unfavorably. The decline in favorability since then has largely come among Republicans themselves: In the current survey, 68% of Republicans view their party positively, down from 79% last fall.

By contrast, public views of the Democratic Party are unchanged since October. Currently, 45% of the public has a favorable impression of the Democratic Party, while 50% have an unfavorable opinion.

The latest national survey by the Pew Research Center, conducted April 12-19 among 2,008 adults, finds that Democrats have a far more favorable impression of their party than Republicans have of theirs. Nearly nine-in-ten Democrats (88%) view their party favorably, which is 20 points higher than Republicans' ratings of the GOP (68%).

GOP's image turns more negative

% who have a _____ view of each party

Don't know responses not shown.

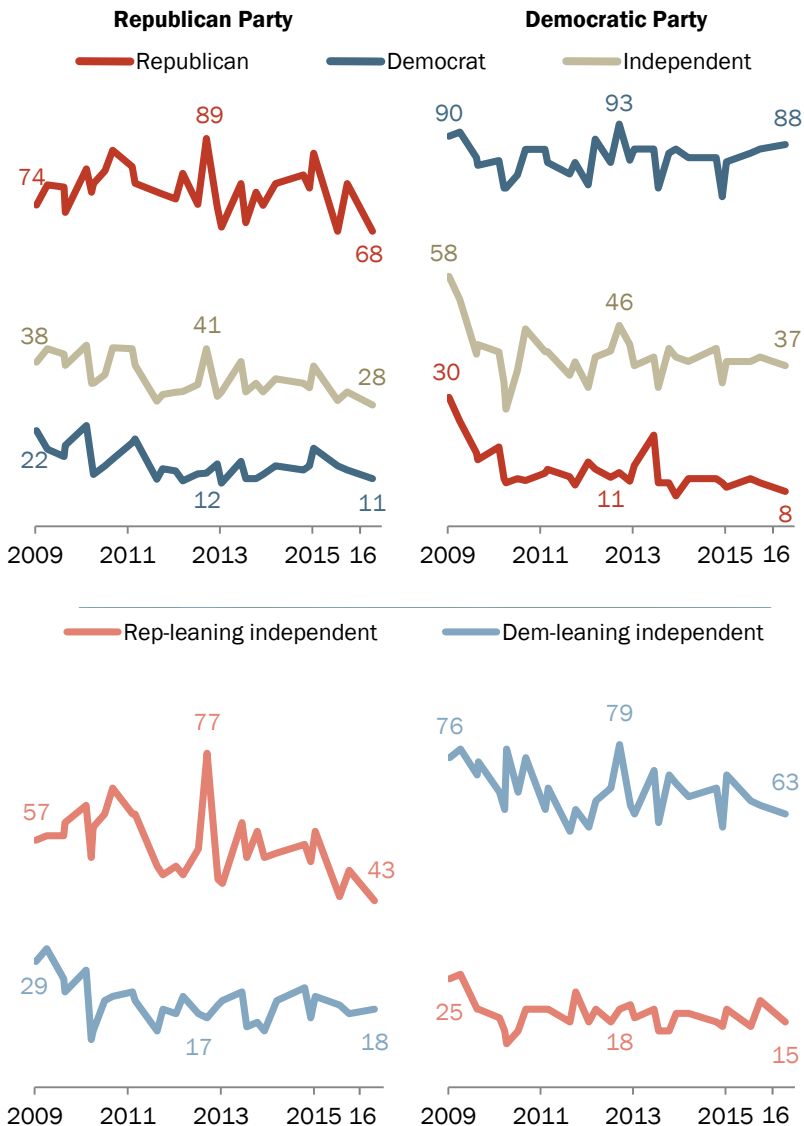

PEW RESEARCH CENTER

Just 28% of independents view the Republican Party favorably, while 37% say they have a favorable impression of the Democratic Party. Notably, just 43% of Republican-leaning independents view the GOP favorably, while 50% hold a negative opinion of the party.

Democratic-leaning independents, like those who identify as Democrats, have much more positive impressions of the Democratic Party. About six-in-ten (63%) view the party favorably, compared with 32% who have an unfavorable view.

Republicans have less favorable view of the GOP

% of each who have a favorable opinion of ...

Source: Survey conducted April 12-19, 2016.

PEW RESEARCH CENTER

Overall, a quarter of the public now expresses unfavorable opinions of both political parties. [This is driven in part by the growing share of Republicans and Republican leaners](#) who view the GOP negatively, and by the overwhelming shares in both parties who view the opposing party unfavorably.

The share holding negative views of both parties is higher today than in previous presidential election years. In 2012, 18% viewed both parties unfavorably and in 2000, just 7% had unfavorable opinions of both the Republican and Democratic parties.

A quarter of the public has an unfavorable view of both parties

% saying they have an unfavorable view of BOTH the Republican Party and the Democratic Party

Source: Pew Research Center merged data. Data for 1992-2015 based on yearly averages, data for 2016 based on survey conducted April 12-19, 2016.

PEW RESEARCH CENTER

Most demographic groups view Democratic Party more favorably than the GOP

Among most demographic groups, more have a favorable opinion of the Democratic Party than the Republican Party. While women are more likely than men to view the Democratic Party favorably (49% vs. 42%), only about a third of women (32%) and men (33%) have a favorable impression of the Republican Party.

As in the past, most blacks (79%) view the Democratic Party favorably, while an identical share of blacks has a negative opinion of the Republican Party. Among Hispanics, 56% have a positive view of the Democratic Party; 61% of Hispanics have an unfavorable opinion of the GOP.

By contrast, identical shares of whites view both parties favorably (37% each). Among whites, there are sizable educational differences in opinions of the parties. More white college graduates have a favorable impression of the Democratic Party (46%) than the Republican Party (27%). Among whites with less education, 43% view the GOP favorably, while just 32% have a positive view of the Democratic Party.

Educational differences among whites in views of the two parties

% who have a _____ view of each party

PEW RESEARCH CENTER

Methodology

The analysis in this report is based on telephone interviews conducted April 12-19, 2016 among a national sample of 2,008 adults, 18 years of age or older, living in all 50 U.S. states and the District of Columbia (505 respondents were interviewed on a landline telephone, and 1,503 were interviewed on a cell phone, including 879 who had no landline telephone). The survey was conducted under the direction of Abt SRBI. A combination of landline and cell phone random digit dial samples were used; both samples were provided by Survey Sampling International. Interviews were conducted in English and Spanish. Respondents in the landline sample were selected by randomly asking for the youngest adult male or female who is now at home. Interviews in the cell sample were conducted with the person who answered the phone, if that person was an adult 18 years of age or older. For detailed information about our survey methodology, see

<http://www.pewresearch.org/methodology/u-s-survey-research/>

The combined landline and cell phone sample are weighted using an iterative technique that matches gender, age, education, race, Hispanic origin and nativity and region to parameters from the 2014 Census Bureau's American Community Survey and population density to parameters from the Decennial Census. The sample also is weighted to match current patterns of telephone status (landline only, cell phone only, or both landline and cell phone), based on extrapolations from the 2015 National Health Interview Survey. The weighting procedure also accounts for the fact that respondents with both landline and cell phones have a greater probability of being included in the combined sample and adjusts for household size among respondents with a landline phone. The margins of error reported and statistical tests of significance are adjusted to account for the survey's design effect, a measure of how much efficiency is lost from the weighting procedures.

The following table shows the unweighted sample sizes and the error attributable to sampling that would be expected at the 95% level of confidence for different groups in the survey:

Group	Unweighted sample size	Plus or minus ...
Total sample	2,008	2.5 percentage points
Republican	546	4.8 percentage points
Democrat	611	4.5 percentage points
Independent	752	4.1 percentage points
Lean Republican	339	6.1 percentage points
Lean Democrat	333	6.1 percentage points

Sample sizes and sampling errors for other subgroups are available upon request.

In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.
