BUSH AND PUBLIC OPINION

As George W. Bush prepares to leave the White House, the United States is in many ways dramatically different from when he took the oath of office in 2001. His first few months as president were largely unremarkable, despite the contentious 2000 election. But the horrific terror attacks of Sept. 11, 2001 greatly altered the course forward.

The attacks transformed American public opinion and fundamentally reshaped Bush's image. His job approval rating reached 86% by late September. The public expressed broad willingness to use military force to combat terrorism. But then controversies over the build-up to war in Iraq and other Bush policies started to take their toll – at home and abroad.

U.S. forces quickly ousted Saddam Hussein in 2003, but could not create a lasting peace. As the fighting dragged on, Bush won re-election by a narrow margin. In his second term, he failed in his bid to build support for a partial privatization of Social Security. American deaths continued in Iraq, the government bungled the response to the devastating Hurricane Katrina in late 2005 and political scandal reached directly into the White House.

Soon, economic troubles started to mount, and in 2008, the economy went into a dangerous free fall that led to controversial and expensive government intervention in financial markets. The president's approval ratings slid over time to historic lows. His approval last hit 50% as he started his second term. It stood at just 24% in early December.

Not surprisingly, the public's verdict on the Bush presidency is overwhelmingly negative. In a December 2008 Pew Research Center survey, just 11% said Bush will be remembered as an outstanding or above average president – by far the lowest positive end-of-term rating for any of the past four presidents. Yet Bush's impact on public opinion over the past eight years is seen in ways that go well beyond his personal unpopularity.

He helped shape the post-9/11 climate of opinion that was broadly accepting of a muscular approach to U.S. national security. And even after much of the public came to oppose the war in Iraq, there continued to be considerable support for the Bush doctrine of preemptive military action. In spite of the public's shock over pictures of abuse of detainees at the U.S.-run Abu Ghraib prison, nearly half of Americans consistently said that the torture of terrorists to gain key information was at least sometimes justified.

In the final year of his presidency, even as his approval rating steadily declined to historic lows, most Americans continued to say Bush's antiterror policies deserve at least a fair amount of credit for preventing more terror attacks.

In his first term, Bush scored several early legislative successes on domestic issues – such as the No Child Left Behind education reform, two

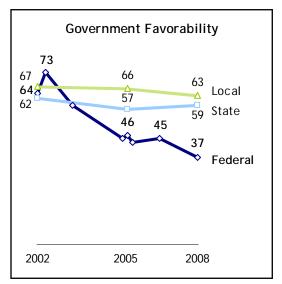

A Bush Success: Preventing Terror Attacks after 9/11						
Bush policies' role in preventing attacks? Great deal Fair amount Not too much Not at all Don't know	<u>Total</u> % 28 34 22 13 <u>3</u> 100	<u>Rep</u> % 49 41 6 2 <u>2</u> 100	Dem % 14 33 30 20 <u>3</u> 100	<u>Ind</u> % 33 29 24 14 * 100		
Survey conducted Feb. 2	0-24, 20	08.				

rounds of tax cuts and the launch of a significant Medicare drug plan.

But after those successes, the instances when Bush was able to mobilize – and maintain – public support for his agenda were rare. Even in the realm of national security, the public increasingly rejected the idea that a large military presence overseas would reduce the threat of terror at home.

Public backing for what was to have been Bush's signature second-term achievement – reforming the Social Security system – withered within months of his reelection. His immigration reform proposal faced opposition within his own party, even though it was an issue – like Social Security – where Americans recognized major change was needed.

What might have damaged Bush's legacy most was his administration's mixed record of competent governance. Between Iraq, the government's flawed relief effort in the aftermath of Hurricane Katrina, and more minor missteps over the Dubai ports issue and other matters, the government "brand" deteriorated badly during the Bush years. In late April 2008, just 37% expressed a favorable view of the federal government, about half of the percentage of five years earlier (73%).

Final Judgments

In a Pew survey conducted Dec. 3-7 among 1,489 adults, the American public paints a harshly negative picture of Bush's tenure. Nearly two-thirds (64%) say his administration will be remembered more for its failures than its accomplishments, and a plurality (34%) says Bush will

go down in history as a poor president. Fully 68% say they disapprove of Bush's performance and most of those – 53% of the public – say they disapprove strongly. That is the highest rate of strong disapproval measured by Pew surveys in Bush's eight years in office.

As his second term ends, only 13% say Bush has made progress toward solving the major issues facing the country; 37% say

Judgment of History: Bush vs. Recent Presidents						
Will go down in history as Outstanding Above average Average Below average Poor Don't know	<i>Ronald</i> <i>Reagan</i> <u>Jan 89</u> % 17 42 25 9 5 5 2 100	George H.W. Bush Jan 93 % 6 30 51 8 4 1 100	<i>Bill</i> <i>Clinton</i> <u>Jan 01</u> % 12 32 32 32 10 11 <u>3</u> 100	George W. Bush <u>Dec 08</u> % 3 8 28 24 34 34 <u>3</u> 100		
<i>Presidential approval</i> Approve Disapprove Don't know	64 32 <u>4</u> 100	56 37 <u>7</u> 100	61 30 <u>9</u> 100	24 68 <u>8</u> 100		

he has made those problems worse and 34% say he has tried but failed in his efforts. Another 11% say he has not addressed the major problems facing the country.

More than three times as many people say Bush will go down in history as a poor president (34%) than said the same of Bill Clinton at the end of his presidency (11%). About a quarter (24%) say Bush will be seen as below average and close to three-in-ten (28%) say he will be seen as average. Just 11% say he will go down in history as above average or outstanding.

Not surprisingly, the most critical assessments come from Democrats. More than half (53%) say Bush will go down in history as a poor president, while 25% say he will be remembered as below average. More than four-in-ten Republicans (44%) say he will be remembered as an average president; 21% say below average and 6% say poor. Two-in-ten say he will be remembered as above average, while 7% say outstanding.

Americans by a wide margin (64% to 24%) also say that in the long run the failures of the Bush administration will outweigh its accomplishments. The assessment of Clinton in 2001, despite controversy over how he had conducted himself in office, was virtually a mirror image. Six-in-ten said the accomplishments would outweigh the failures, and 27% said the failures would outweigh the accomplishments.

Just over half (52%) of Republicans say the Bush administration will be best known for its accomplishments. That number is significantly smaller for independents (20%) and Democrats (8%). When Clinton was leaving office, his own party (77%) and

Contrasting Legacies					
<i>Administration will be best known for</i> Accomplishments Failures	Clinton Jan <u>2001</u> % 60 27	Bush Dec 2008 % 24 64			
<i>Republicans</i> Accomplishments Failures	41 43	52 33			
<i>Independents</i> Accomplishments Failures	60 27	20 68			
<i>Democrats</i> Accomplishments Failures	77 13	8 83			

independents (60%) were much more convinced he would be remembered for his accomplishments.

Second Term Approval Slide

Between the start of his second term and December 2008, Bush's approval rating dropped from 50% to 24%, a level that rivals the historic lows recorded by Gallup for Harry S Truman as he left office in 1952. Declines came across demographic and political groups, though significant divides still exist among those with differing political ideologies.

Approval among moderate and liberal Republicans saw one of the sharpest drops – from 82% to 50%. Conservative Republican approval dropped from 94% to 66%. Independent approval started at below

Bush Approval Drop Over Second Term						
Total	<i>Jan</i> <u>App</u> % 50	2005 <u>Disapp</u> % 43	<i>Dec</i> <u>App</u> % 24	2008 Disapp % 68	App <u>change</u> -26

half in 2005 - 47% – but dropped to 18% by December 2008. The change among Democratic groups, already highly critical of Bush, proved less dramatic. Approval among conservative and moderate Democrats dropped from 22% to 8%, while approval among liberal Democrats dropped from 7% to 2%.

Bush's approval dropped significantly among all education levels. In terms of age groups, the largest decline came among the youngest voters – those age 18-29. Within that group, approval dropped from 50% to 19%. The oldest group – age 65 and up – experienced a smaller decline, dropping from 47% to 26%.

A Legacy of War

When people are asked what they think Bush will be most remembered for after he leaves office, the most frequent responses volunteered are tied to the wars in Iraq and Afghanistan and the fight against terrorism. More than half (51%) of responses mention facets of the Global War on Terror, with close to three-in-ten (29%) specifically mentioning Iraq.

About 17% include specific negative assessments of Bush and his performance. Small percentages within that group refer to his competence (2%), his negative impact on the country (2%) or label him the "worst president" (2%). Another 13% refer to the impact of the Sept. 11 terror attacks, with 9% mentioning the attacks specifically and 3% noting that Bush had kept the country safe from major attack since that day. Another 12% mentions economic issues, including 7% who refer to the economy specifically, 4% who mention the current crisis and 3% referring to the recession. Another 4% offer positive assessments of Bush's performance in office.

Meanwhile, concerns about Bush's effectiveness are also seen in the one-word answers people give to describe their impressions of the president. In mid-2005,

Describing Bush in a Word: 2004 vs. 2008					
	2004	2008	<u>Change</u>		
Incompetent	21	56	+35

positive one-word descriptions outnumbered negative ones, but in more recent lists, the responses have been more negative. The most frequently mentioned description in the latest survey was "incompetent," just as it was in February 2007 and March 2006. Many of the terms

offered by respondents in the December 2008 survey are negative, though the second most frequently mentioned description was honest. Good and honorable also make the list.

The Global Outlook

On the foreign stage, a solid majority of Americans say the country is significantly less respected than in the past – and many of those people see that as a major problem. Many Americans are eager to turn inward to deal with this nation's problems: fully 60% said in September 2008 that domestic policy should be the primary focus of the new president. And a greater percentage than before the Iraq war now say the best way to reduce the threat of terror is to reduce America's military presence overseas, not increase it.

Meanwhile, a 2008 survey by the Pew Global Attitudes Project showed that majorities in 19 of the 24 nations – including several strong U.S. allies – had little confidence in Bush as he neared the end of his presidency. A 2007 survey of 45 nations found anti-American sentiment extensive as well as increasing disapproval for key elements of U.S. foreign policy.

And the image of the U.S. in the Muslim world remained abysmal. Iraq, the war on terrorism and American support for Israel continued to generate animosity in the Middle East, Asia and elsewhere. In many nations considered central to the war on terror, the general public deeply distrusted the United States. Even in countries like Kuwait that have long been considered relatively pro-American, the U.S. image had declined.

Among the few bright spots for Bush in the Global Attitudes surveys were the African nations that had benefited from administration programs to boost economic growth and reduce the spread of AIDS. In 2008, majorities in Tanzania and Nigeria expressed confidence in the president.

Still, Bush has had some success at home building support for tough tactics – including harsh interrogation policies for foreign detainees and government monitoring of phone calls or emails without warrants – to gather information about possible terrorists and stop potential attacks. On balance, more Americans say they worry that anti-terror policies have not gone far enough in protecting the United States than say they feel the anti-terror policies have "gone too far in restricting civil liberties."

The Political Legacy

When Bush took office, Republicans controlled both Congress and the White House. But voter party preferences shifted significantly during Bush's second term as missteps, bad news and scandals took their toll on Bush and GOP congressional leaders. In the 2006 midterm

elections, more independents and moderates aligned themselves with the party out of power and Democrats took control of the House and the Senate.

In 2008, Bush was barely seen during the presidential campaign. Both Barack Obama and John McCain persistently criticized his administration, vowing to bring "change" to Washington. Obama's significant win and additional Democratic gains in Congress signaled a continuing decline of the Republican Party under Bush.

In surveys conducted in the fall of 2008, 51% of all voters said they thought of themselves as Democrats or leaned toward the Democratic Party. That was up five points from 46% during the same period in 2004. Meanwhile, the number identifying with or leaning toward the Republican Party fell from 45% to 41%.

The greatest gains came among younger voters. Only among voters age 65 and older did the percentage identifying with the Democratic Party decrease – from 49% in 2004 to 47% in 2008. The percentage of voters age 18 to 29 identifying with the Democratic Party increased from 48% in the fall of 2004 to 61% in the fall of 2008. Democrats now outnumber Republicans by a margin of nearly two-to-one (61% to 32%) in this age group, up from only a seven-point advantage in 2004.

PART 1: DIVIDED NATION

In the 2000 presidential campaign, George W. Bush famously pledged that if elected he would be a "uniter, not a divider." He cited his record as governor of Texas and vowed he would work with Democrats in Washington to get the people's business done. But the nation was about to enter a period of great upheaval – first came the partisan battles over the election results, then a slowing economy and a wave of business scandals. But the devastating terror attacks of Sept. 11, 2001, the wars that followed and the tradeoffs made to protect the country from future attack had the greatest impact on the persistent partisan divide.

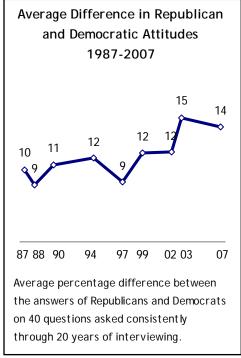

The initial response to the horrific attacks had been national unity, exemplified by the near-universal support for taking on Al Qaeda in Afghanistan. But that spirit soon dissolved amid rising political polarization and anger, largely over the strategy and rationale for launching a pre-emptive war to oust Saddam Hussein in Iraq. Following Sept. 11, members of both parties, but especially Republicans, grew more supportive of an assertive national security policy – as seen in attitudes on the use of force and other issues. But in the following years, many Democrats shifted away from that approach, frustrated by the war in Iraq and worried about whether it would actually help eliminate terror groups like Al Qaeda.

More than a year before the 2004 election, Pew's longitudinal study of the public's political values showed that partisan polarization had reached a new high, as both Republicans and Democrats had become more intense in their political beliefs. The 2007 wave of the same study found that this increase in the size of the partisan gap persisted into Bush's second term.

The Iraq war started in March 2003 and Baghdad quickly fell to U.S. forces. But the war proved far from over, as the American military and its allies faced a long and deadly struggle to establish peace and order. U.S. forces found no weapons of mass destruction, though administration officials had argued their presence was the primary reason for the push to war.

highly partisan. Nearly twice as many Republicans as Democrats said the military effort was going well (34% vs. 18%). Roughly nine-in-ten Republicans (88%) at that time backed the decision to go to war, compared with fewer than half (48%) of Democrats.

The Bush Gap

A May 2004 poll showed the great level of partisanship in evaluations of the president's performance. As had been the case since Bush took office, Republicans were solidly behind him, with 85% approving and just 11% disapproving of his job performance. But, for the first time, Democrats were nearly as unified in opposition to Bush. Just 13% of Democrats approved of the president's job performance, while 79% disapproved.

As the election approached, Bush was in a tight contest against Massachusetts Sen. John Kerry. Despite the deep partisan divisions, enough swing voters apparently had doubts about changing leaders at wartime or putting Kerry in charge of the fight against terrorism. Bush won a second term with 51% of the vote and Republicans held on to their congressional majorities.

Pew's post-election survey showed that the divisions so apparent in the election showed no signs of narrowing. The public remained deeply split over the president's job performance, the situation in Iraq and the state of the national economy. Bush voters were upbeat on all three questions – 92% approved of the president's job performance; 79% said the war effort was going well, and 58% said the economy was excellent or good. Those who voted for Kerry, meanwhile, offered dramatically different

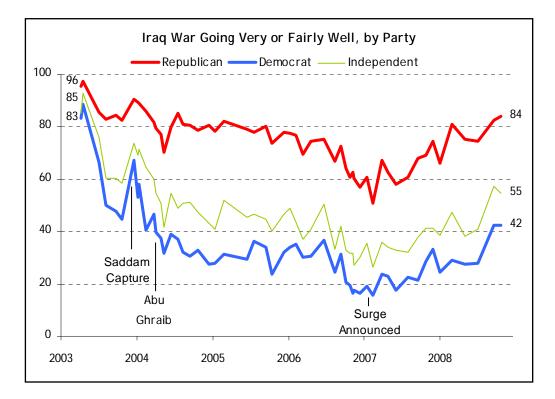

answers. Only 7% approved of the president's job performance; 75% said the war was not going well and 81% described the economy as only fair or poor.

Survey conducted Dec. 1-16, 2004.						

Divided Over the War ...

The war would continue to be a major reason for the divide between Republicans and Democrats. In December 2005, Republicans were more than twice as likely as Democrats to believe that the U.S. military effort in Iraq was going at least "fairly well" (78% for Republicans, 32% for Democrats). Independents (47%) were closer to Democrats in their assessment. Similar gaps showed up in more specific questions: 74% of Republicans said progress was being made on stopping the use of Iraq as a terrorist base for attacks; only 31% of Democrats agreed.

The wide partisan gap in views of the situation in Iraq continued even after the U.S. troop surge reduced the level of violence in the country. In 2008, increasing proportions of Republicans, Democrats and independents expressed positive opinions about the military situation in Iraq. But the partisan differences in perceptions remained sizable and the public remained deeply split over whether to bring U.S. forces home from Iraq as soon as possible, or keep them there until the situation stabilizes.

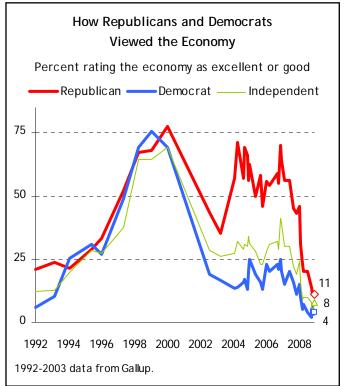

And the Economy

In a stark contrast to the Clinton years, public perceptions of the economy were also deeply split along political lines for much of Bush's presidency. In January 2006, about a third of Americans (34%) rated economic conditions as excellent or good, while nearly twice that number said they were fair or poor (64%). Republicans generally saw an economy that was thriving; 56% judged it as excellent or good. Democrats and independents, meanwhile, were more negative; just 23% of Democrats and 28% of independents said the economy was doing well.

Republicans have long had significantly higher incomes than independents of Democrats. But across every income category, Republicans were substantially more likely than Democrats to view the economy positively.

It was only after the nation's economy deteriorated in Bush's final year in office, and Republicans' opinions of the economy turned much more negative, that the partisan divide narrowed. By December 2008, just 11% of Republicans viewed the economy as excellent or good, compared with 8% of independents and 4% of Democrats.

Darkening Clouds for the GOP

In the 2006 midterm elections, growing negative perceptions of Bush and the GOPcontrolled Congress turned into trouble for the Republicans. Democrats took control of both the House and the Senate. Democrats held a small turnout advantage (38% to 36%, according to the National Exit polls), but what determined the outcome was the shifting sentiments of independents and moderates.

These voters showed a strong preference for Democratic candidates. For example, by 57%-39%, independent voters cast ballots for Democrats, according to exit polls. Two years earlier, independent voters were more evenly divided (50% Democrat-46% Republican).

Exit polls showed that Bush was more of a drag on GOP candidates than former President Clinton was on Democratic candidates in 1994, when Republicans were able to take control of Congress. More than a third (36%) said they voted to oppose Bush; that compares with 27% who voted to oppose Clinton in 1994, and 21% in 1998, the year Congress voted to impeach the president.

Views of Congress also were extremely negative. About four-in-ten voters (41%) said that Congress had accomplished less than usual, while just 6% said it had accomplished more than usual. By a 62%-to-10% margin, voters said that Republicans, not Democrats, were to blame. High-profile scandals also had an impact. But the war remained the central issue. By Election Day, 42% of the public approved of the war, compared with 56% who disapproved.

As the Democratic Congress convened in January 2007, a Pew survey showed that a large majority (66%) continued to say that the country was more politically divided than it had been in the past. The perception that America had become more polarized was shared across partisan and ideological groups, although Democrats (72%) were especially likely to say the country had become more divided.

At that time, Americans overwhelmingly thought there were important differences between the Democratic and Republican parties. More than a third (35%) said there was a great deal of difference between the two major parties, while another 40% said they saw a fair amount of

difference. Only 20% said there was hardly any difference between the parties.

PART 2: BUSH AND THE ISSUES

Shortly after President Bush took office in February 2001, no single issue stood out as the top national problem, though morality and ethics were mentioned most frequently (at just 12%); fewer than 1% cited terrorism. There was no clear public consensus about the nettlesome issue that was confronting policymakers – how to spend the federal government's budget surplus.

With the Sept. 11 terror attacks a few months later, the nation's policy agenda was irreversibly altered. Terrorism and the struggling economy dominated the public's concerns. Bush's decision to go to war in Afghanistan won overwhelming public support, while his subsequent decision to take military action in Iraq proved to be the most fateful of his presidency. At home, Bush struggled to sway public opinion his way to enact legislation furthering his agenda.

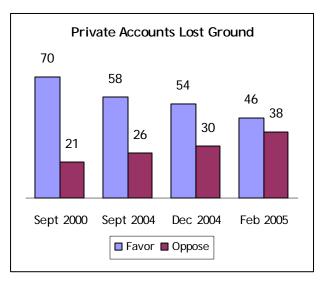

Bush succeeded in winning significant support for his position on some issues. On balance, the public saw the need for certain actions to reduce the risk of terror at home, even though some argued those steps infringed on basic civil liberties. On others, the task proved more difficult. For example, he could not muster strong support for making his signature tax cuts permanent or for privatizing a portion of the Social Security system. His signature immigration reform proposal drew tepid support even from his fellow Republicans. Here is how the public reacted to four top issues on Bush's policy agenda:

Social Security

Bush first promoted the idea of private Social Security accounts during his 2000 run for the White House. He established a commission to study potential changes once in office. The plan would have allowed many workers to allocate a portion of the payroll taxes that would

regularly go into Social Security into accounts with investments for their retirement that they could control. But the president had trouble building broad support for the idea.

As Bush started his second term in 2005, a Pew survey asked about the proposal. Despite an intensive campaign to promote the idea, the percentage of Americans who said they favored private accounts in Social Security fell from 58% in September 2004 to just 46% in March 2005. During the 2000 campaign, 70% said they supported the concept.

There was broad public awareness that Social Security faced a financial shortfall. In February 2005, two-thirds (67%) said they thought the Social Security program would run out of money in the future. But of those opposed to private accounts, nearly half (48%) said they worried about the impact of potentially risky investments. Nearly three-in-ten (28%) of those people cited the possibility that benefits would have to be cut.

Bush continued to promote the idea later in his presidency, but faced with broader budget concerns and stiff opposition from senior citizens groups and others, it gained little traction.

Tax Cuts

Bush ran for election in 2000 pledging to cut taxes as a way to boost a slowing economy. From the start, the public was divided over the idea. In February 2001, a modest plurality (43%-34%) backed the tax cut idea, though when people were asked how they would like to see the then-surplus used, a plurality (37%) said they would first shore up Social Security and Medicare.

Moreover, most Americans (65%) believed that the tax cuts would benefit some people more than others. Among those who expressed this view, the prevailing belief was that the tax reductions would benefit the wealthy rather than the poor or the middle class.

Still, Congress quickly approved a first round of tax cuts in mid-2001. The climate would soon change

Views of Bush's Tax Cuts: Before

* Asked of those who said tax cuts would benefit some more than others.				

dramatically, first with the devastating Sept. 11 terror attacks and then with the start of wars in Afghanistan and Iraq.

In March 2003, Pew asked people how they thought the administration should pay for large increases in spending on defense and homeland security. When offered a choice of three alternatives, a 40% plurality said that the tax cuts should be postponed or reduced; 20% favored adding to the budget deficit; and just 16% supported scaling back spending on domestic programs.

With hopes that the Iraq war would end quickly, Bush sought a second round of tax cuts that year, but the public remained skeptical. In a May 2003 survey, a majority (56%) said

the tax cuts would mainly benefit wealthy people, compared with just 21% who believed they would be fair to everyone. About half (51%) believed they would increase the federal budget deficit. But about four-in-ten believed the tax cut would boost the economy and create jobs (44%).

Congress and the president enacted a plan that spring, though the tax cuts still engendered mixed support. In January 2006, half of Americans approved of the major cuts in federal income tax rates, while 38% disapproved.

Since then, Bush and congressional Republicans have repeatedly called for making the tax cuts permanent. Support for that proposal, though, has consistently been at 30% or less. In late October 2008, only 23% said all the tax cuts should remain in place; about a third (34%) said tax cuts for the wealthy should be repealed while others remain in place; and 27% said all the tax cuts should be repealed. Those numbers have changed little in four years.

Anti-Terrorism Policies

The terror attacks of Sept. 11, 2001, led many Americans to support steps that Bush said were needed to protect the country, including some vigorously opposed by those worried about limits on civil liberties.

In a February 2008 survey, more people (47%) said their greater concern about U.S. antiterrorism policies was that they had not gone far enough to adequately protect the country than said the policies had gone too far in restricting civil liberties (36%). In August 2006, 55% said their greater concern was that the policies had not gone far enough, compared to 26% who worried about restrictions on civil liberties.

The 2008 survey showed increasing worries about civil liberties, particularly among Democrats. Half had said in 2006 that the policies had not gone far enough in protecting the United States, while a

third said they went too far in restricting civil liberties. In 2008, the balance shifted to concerns about civil liberties (47% said they were concerned about civil liberties; 39% worried that the United States had not done enough).

In the August 2006 survey, Bush had made headway with his defense of the government's authority to conduct warrantless wiretaps of suspected terrorists. By 54%-43%, the public said it is generally right for the government to monitor communications of Americans suspected of having terrorist ties without first obtaining permission from the courts. In January 2006, the public was evenly divided over this issue (48% generally right/47% generally wrong).

Meanwhile, public attitudes regarding other anti-terrorism policies remained divided and highly partisan. In February 2008, a narrow majority (52%) said it is right for the government to monitor the communications of Americans suspected of having ties to terrorists, without first getting court permission; 44% said this practice is generally wrong.

In that survey, more than half of Americans (52%) said that the government's policies toward the prisoners housed in Guantanamo Bay, Cuba, are fair, while a third said they are unfair. Again, the views were highly partisan. Nearly three-quarters of Republicans (73%) believed that U.S. policies toward these prisoners were fair, and only 13% said the policies were unfair. By contrast, nearly half of Democrats (47%) said the policies were unfair, while 39% said these policies are fair.

The overall willingness to balance priorities when dealing with terror threats could be tied to widespread perceptions that terrorists are still capable of striking within the United States. In February 2008, 57% said the ability to pull off such a strike is the same or greater than on Sept. 11. In August 2002, about six-in-ten (61%) said that capability was either the same or greater than in 2001.

Immigration

President Bush pushed for comprehensive immigration changes without success, though many Americans agreed with principles behind the legislation. In 2004, Bush laid out a proposal to allow certain workers in the country illegally to join a temporary labor program and apply for permanent U.S. residency. The president stressed that he opposed amnesty, but wanted to revamp the system to help immigrants and employers – and to boost national security.

In December 2005, the GOP-led House passed a significantly less forgiving measure, which died in the Senate. A March 2006 survey showed a divided public. A narrow majority (53%) believed that illegal immigrants should be required to go home, compared with 40% who said they should be granted some kind of legal status allowing them to stay in this country. When the option of a temporary worker program was introduced, the fissures became even more evident.

As proposed by Bush, such a program would allow illegal immigrants to remain in the U.S. for a fixed amount of time on the condition they eventually go home. Opinion was almost evenly divided between those who favored allowing some illegal immigrants to remain in the U.S. under a temporary work program (32%); those who said illegal immigrants should be allowed to stay permanently (32%); and those who said they should go home (27%).

In June 2007, when the Senate was considering an immigration bill, 41% of those who had heard at least a little about the legislation said they opposed it, compared to 33% who said they supported it. Bush failed to rally Republicans behind the legislation. Fewer than four-in-ten Republicans (36%) said they favored the bill then before Congress; 43% opposed the bill and 21% offered no opinion.

Nonetheless, there was bipartisan support

Bush-Backed Immigration Bill Drew Tepid GOP Support

June 2007 Opinion of current immigration bill*: Favor Oppose Don't know In dealing w/illegal immigrants already here Provide <u>a way to gain lega</u> <u>citizenship</u> if they meet certain conditions**		$\begin{array}{c c} \hline Rep \\ \hline \\ \hline \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ $

* Based on those who have heard a lot/little about the bill. ** "if they pass background checks, pay fines and have jobs." Half of respondents asked about "providing amnesty;" half about "providing a way to gain legal citizenship."					

for one of the bill's primary goals – to provide a way for people who are in the country illegally to gain legal citizenship under certain conditions. Overall, 63% – and nearly identical numbers of Republicans, Democrats and independents – favored such an approach if illegal immigrants "pass background checks, pay fines and have jobs."

In general, the public was less supportive of providing "amnesty" for illegal immigrants than of providing a way for illegal immigrants to gain citizenship. The way that the issue was characterized had a significant effect on Republican views; while 62% of Republicans favored a way to grant citizenship to illegal immigrants if they met certain conditions; 47% supported "providing amnesty" for illegal immigrants under the same conditions.

PART 3: BUSH AND AMERICA'S PLACE IN THE WORLD

Faced with a long-running and difficult war in Iraq, continued worries about terror attacks and growing economic uncertainty at home, the public became less supportive of global engagement during the final years of the Bush presidency. That marked a significant change from the period immediately after the terror attacks of Sept. 11, 2001, when there was a sharp rise in internationalist sentiment.

Following the attacks, the United States benefited from a significant measure of goodwill around the world. Much of that would not last. Surveys by the Pew Global Attitudes Project found that Western Europeans were already skeptical of Bush in the summer of 2001, seeing him as more eager than his predecessor, Bill Clinton, to make decisions based entirely on U.S. interests. Then, the build-up to the war in Iraq, the administration's largely unilateral approach, and the execution of the war led to higher disapproval ratings for Bush and his policies in many corners of the world.

Most Americans believe that global respect for the United States has eroded. In a September 2008 survey, seven-in-ten voters said the nation is less respected than in the past, and nearly half (48%) said they saw that as a major problem. Fully 81% of Democratic voters said the United States is less respected, compared with a much smaller majority of Republican voters (55%).

	100	100	100	100	100

As war in Iraq continued, Americans also appear to have had second thoughts about the best way to reduce the risks of terror attacks. In the summer of 2002, before serious public discussion of removing Saddam Hussein from power had begun, nearly half of Americans (48%) said that the best way to reduce terrorism was to increase our military involvement overseas. Just 29% said less involvement would make the nation safer. Four years later, as the war dragged on, fully 45% said the best way to reduce the threat of terrorist attacks on the U.S. was to decrease America's military presence overseas. In the fall of 2008, that number stood at 48%.

The public – both Democrats and Republicans – also saw a Bush administration misstep in early 2006 in the handling of a bid by an Arab-owned company, Dubai Ports World, to buy a company that controlled operations at several major U.S. seaports. An administration panel initially approved the deal, but faced a great backlash in Congress once the decision was made public.

Most Americans (58%) said Congress acted appropriately in strenuously opposing the deal, while just 24% said lawmakers made too much of the situation. There was broad opposition to the proposed deal from across the political spectrum, including two-to-one disapproval among conservative Republicans (56%-27%).

Dubai Ports never took control of the American ports, but the skirmish highlighted Americans' unease about potential points of U.S. vulnerability. Still, a majority (53%) at the time said foreign companies investing in the U.S. was good for the U.S.

An Inward Focus

In the September 2008 survey, the public's top long-term foreign policy goals were decidedly America-centric. Defending the country against terrorism, protecting U.S. jobs, and weaning the country from imported energy all drew extensive bipartisan support. As in the past, there were substantial political disagreements over most other international priorities: about twice as many Democrats as Republicans rated reducing U.S. military commitments as a top priority, and nearly three times as many attached great importance to dealing with global climate change.

Though the public was feeling better about how the war in Iraq was going, it also showed a sharply diminished appetite for U.S. efforts to deal with an array of global problems. Fewer people than at any point in this decade assigned high priority to such foreign policy goals as preventing genocide, strengthening the United Nations, promoting and defending human rights, and reducing the global spread of AIDS and other infectious diseases.

With widespread economic uncertainty at home, the public clearly wants the next president to devote most of his attention to domestic concerns. Six-in-

ten Americans said in September that it is more important for the new president to focus on domestic policy rather than foreign policy, compared with just 21% who say foreign policy

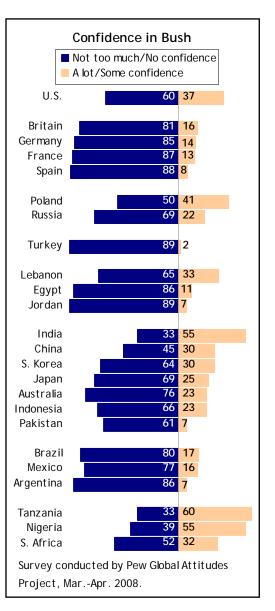

should be the primary focus. Opinion about this issue was more evenly divided in January 2007, shortly after Bush announced plans for the military surge in Iraq; at that time, 40% said the president should focus on foreign policy, while 39% said he should focus on domestic policy.

Little Confidence in Bush Abroad

As President Bush's second term neared its final months, people in many nations were keeping an eye on the American election. Many were looking forward to change in the United States. In 2008, the Pew Global Attitudes Project asked citizens of 24 countries whether they could count on Bush to do the right thing regarding foreign affairs. Majorities in only three (India, Nigeria, and Tanzania) said they had a lot or some confidence. Both African nations have benefited from Bush's efforts to tackle AIDS around the globe.

On the other side of the ledger, majorities in 19 of the 24 countries in the survey had little or no confidence in the American president. In the four Western European countries surveyed, majorities without much confidence ranged from 81% in Great Britain to 88% in Spain. In the Middle East, majorities rose as high as 89% in Turkey and Jordan.

The survey also found a widespread belief that U.S. foreign policy "will change for the better" after the inauguration of a new American president next year. Among people who had been following the election, large majorities in France (68%), Spain (67%) and Germany (64%) said they believed that U.S. foreign policy would improve after the election.

But that belief was far from universal. In Jordan and Egypt, more people who were following the election said they expected new leadership to change U.S. foreign policy for the worse than said they expected a change for the better. Two-thirds of the Japanese (67%) following the election said it would not bring about much change in U.S. foreign policy. That was the plurality opinion in Russia and Turkey as well.

In nearly every country surveyed, greater numbers expressed confidence in the ultimate winner in the presidential race – Barack Obama – than in John McCain.

ABOUT THE SURVEY

Results for this survey are based on telephone interviews conducted under the direction of Princeton Survey Research Associates among a nationwide sample of 1,489 adults, 18 years of age or older, from December 3-7, 2008 (1,126 respondents were interviewed on a landline telephone, and 363 were interviewed on a cell phone, including 138 who had no landline telephone). Both the landline and cell phone samples were provided by Survey Sampling International.

The combined landline and cell phone sample are weighted using an iterative technique that matches gender, age, education, race/ethnicity, region, and population density to parameters from the March 2007 Census Bureau's Current Population Survey. The sample is also weighted to match current patterns of telephone status and relative usage of landline and cell phones (for those with both), based on extrapolations from the 2007 National Health Interview Survey. The weighting procedure also accounts for the fact that respondents with both landline and cell phones have a greater probability of being included in the sample.

The following table shows the error attributable to sampling that would be expected at the 95% level of confidence for different groups in the survey:

Group	Sample Size	Plus or minus
Total sample	1,489	3.0 percentage points
Form 1 sample	766	4.0 percentage points
Form 2 sample	723	4.5 percentage points

In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.

ABOUT THE CENTER

The Pew Research Center for the People & the Press is an independent opinion research group that studies attitudes toward the press, politics and public policy issues. We are sponsored by The Pew Charitable Trusts and are one of seven projects that make up the Pew Research Center, a nonpartisan "fact tank" that provides information on the issues, attitudes and trends shaping America and the world.

The Center's purpose is to serve as a forum for ideas on the media and public policy through public opinion research. In this role it serves as an important information resource for political leaders, journalists, scholars, and public interest organizations. All of our current survey results are made available free of charge.

All of the Center's research and reports are collaborative products based on the input and analysis of the entire Center staff consisting of:

Andrew Kohut, Director Scott Keeter, Director of Survey Research Carroll Doherty and Michael Dimock, Associate Directors Michael Remez, Senior Writer Juliana Menasce Horowitz, Robert Suls, Shawn Neidorf, Leah Christian, Jocelyn Kiley and Neha Sahgal, Research Associates Kathleen Holzwart and Alec Tyson, Research Analysts

ASK ALL:

Q.12 Thinking about the major problems facing the country, would you say President Bush has made progress toward solving these problems, tried but failed to solve these problems, not addressed these problems, or made these problems even worse?
